Preventative Services Offered – Indicate what service you would like today (additional charges apply).	Yes	No
<p>Pre-med Prior to Vaccinations: Hudspeth Animal Hospital takes step possible to minimize the chance of an allergic reaction to vaccines. Give an antihistamine 20 – 30 minutes before vaccination reduces, however, does not eliminate the risk of vaccine allergic reactions. This is recommended in small dogs and breeds prone to vaccine allergic reactions. A diphenhydramine injection prior to vaccination, or after vaccination to lessen its severity if they do react. Additional medications or treatments may be needed for severe vaccine allergic reactions.</p>		
<p>Heartworm Prevention: Special worms cause heartworm disease. The worms are called <i>Dirofilaria immitis</i> and are transmitted by mosquitoes. The worms live the heart and big vessel of the heart. They often migrate into the lungs. These worms cause irreversible damage to the heart leading to heart disease. Infected dogs will die without appropriate treatment. Cats are also capable of getting heartworm disease. Signs of infection in cats includes sudden death, vomiting, coughing, respiratory distress. Heartworm disease is 100 % preventable by giving appropriate heartworm preventative to cats and dogs. Appropriate heartworm testing is required before prevention may be administered in dogs. Heartworm testing is also recommended in cats.</p>		
<p>Anal Gland Expression: Anal sacs are found along the edge of the anus. They may get blocked, infected and full. They normally empty when the pet has a bowel movement, however, if the secretion is thick, it will not be able to flow out. Signs of issue with the anal sacs may include licking, chewing, scooting, discharge around the anus, and pain. Manual expression will become necessary if blocked.</p>		
<p>Flea and Tick Prevention: Tick, fleas, roundworms, and hookworms are common parasites of companion animals that can cause disease in humans. Keeping your pets on preventatives protects both pet and owner. We can help you choose the appropriate heartworm preventative for your pet. A flea control product will be administered to pets with fleas. This will be done at the owner's expense. This is to protect animals in the hospital and prevent infestation of the hospital.</p>		

As owner / agent / caregiver I have read, understand and agree to the aforementioned.
